If you are having issues trying to find a correct driver for a device on one PC, but have a working driver on another computer, you can easily transfer the driver from one PC to another. Windows stores a copy of each installed driver in C:\Windows\System32\DriverStore\FileRepository folder.

Copy drivers from one computer to another

For the kernel the Major number is the identifier of a driver and it will be linked to the device name handed to the register_chrdev function as the second parameter. The Major number can be a fixed number or just a 0 as here. If it is 0, the kernel will check what Major number is available on the system and give this to our driver by self.

Simple I/O device driver for RaspberryPi - CodeProject
